NETWORK ADMINISTRATOR

Located out of Calgary office, the individual in the Network Administrator position will report to the Supervisor, Technology Services. This role will be responsible for the administration, maintenance and design of Inter Pipeline's network and server environments.

Key Activities and Responsibilities:

- Designing, configuring, installing, integrating, maintaining and troubleshooting of enterprise LAN/WAN networks and systems (enterprise converged networks, wired and wireless)
- Network performance evaluation, monitoring and optimization
- Network security (firewalls, intrusion detection, network access control, incident response and escalation, security policy articulation and compliance checking)
- Maintain accurate and comprehensive documentation diagrams of network infrastructure
- Maintain and support Cisco VoIP telephone system
- Administer and maintain server environments to ensure effective and efficient performance
- Identify, troubleshoot and resolve system and network issues
- Identify opportunities for network growth and scalability with recommended courses of action to support the current and future goals of the organization
- Work with project teams in the design, development and review of technology solutions
- Manage small to medium sized projects according to budgets and schedules

Education, Skills and Experience:

- Five to ten years of experience in a Network Administrator role
- Bachelor degree or equivalent in computer science or a technology field
- Must have hands-on expertise with Cisco switches and firewalls, including planning, design and implementation in an intermediate to large scale network
- CCNA certification is an asset
- CCA certification (or equivalent years of experience) is an asset
- Experience with Microsoft Exchange Server 2007/2013
- Experience with Citrix NetScaler technology design and operations
- Experience with Cisco ASA Firewalls, IDS and ISE
- Familiarity with virtual environments
- Knowledge of mass storage platforms
