

INVESTMENT OVERVIEW

Inter Pipeline is developing Canada's first integrated propane dehydrogenation (PDH) and polypropylene (PP) complex. This \$3.5 billion project is designed to consume approximately 22,000 b/d of locally-sourced, low-cost propane to produce 525 kilotonnes per annum (KTA) of polypropylene. PP is a high-value, easy to transport plastic used in the manufacturing of a wide range of finished products, including consumer packaging and containers, textiles, automobile components and Canadian currency. The Heartland Complex will materially diversify and strengthen Inter Pipeline's existing large-scale NGL processing business, while creating an attractive new market for Alberta propane. Construction at the Strathcona County site, near Inter Pipeline's existing Redwater Olefinic Fractionator (ROF), is currently underway and has an expected in-service date of late 2021.

STRATEGIC RATIONALE

-  Low utility costs and an oversupplied propane market in Western Canada drives a long-term, low-cost feedstock advantage
-  Well-defined project that will utilize globally proven technologies and experienced engineering, procurement and construction firms
-  Integration with existing offgas business creates a competitive advantage; PDH can consume up to 12,000 b/d of high-purity propane produced at ROF
-  Strong support from the Government of Alberta; awarded \$200 million in royalty credits under Alberta's Petrochemical Diversification Program
-  Over 13,000 direct and indirect jobs are expected to be created for Canadians over the four-year construction period

FACILITIES

AREA OF OPERATIONS

CONTRACTUAL FRAMEWORK AND EBITDA GENERATION

Inter Pipeline is conducting a two phase contracting process to anchor the investment. Phase 1, which has been completed, resulted in Inter Pipeline securing certain take-or-pay contracts with an average term of 9 years. Phase 2 contracting has commenced, with the objective of securing between 70 and 85 percent of total petrochemical processing capacity under take-or-pay contracts over the construction period. These contracts are structured to provide a fixed return-on-capital payment, plus a recovery of operating and transportation costs, eliminating Inter Pipeline's exposure to propane or polypropylene commodity price fluctuations. Inter Pipeline intends to utilize the remaining uncontracted plant processing capacity for its own commercial purposes.

Long-Term EBITDA

- Cost of Service:**
 - No volume or commodity price exposure
- Fee Based:**
 - Volume exposure but no commodity price risk
- Commodity Based:**
 - Volume and commodity price exposure

Contract Summary

Long-Term Average EBITDA	\$450 to \$500 million per year
Duration (Phase 1 and 2)	Targeting up to 10 years
