

INVESTMENT OVERVIEW

Inter Pipeline is developing Canada's first integrated propane dehydrogenation (PDH) and polypropylene (PP) complex. This ~\$4.0 billion project is designed to consume ~22,000 b/d of locally-sourced, low-cost propane to produce ~525 kilotonnes per annum (KTA) of polypropylene. PP is a high-value, easily transported plastic used in the manufacturing of a wide range of finished products, such as consumer packaging, textiles, automobile components and medical equipment. The Heartland Complex will materially diversify and strengthen Inter Pipeline's existing large-scale NGL processing business, while creating an attractive new market for Alberta propane. Construction at the Strathcona County site, near Inter Pipeline's existing Redwater Olefinic Fractionator (ROF), is well underway. Operations are expected to begin early 2022, subject to mitigations.

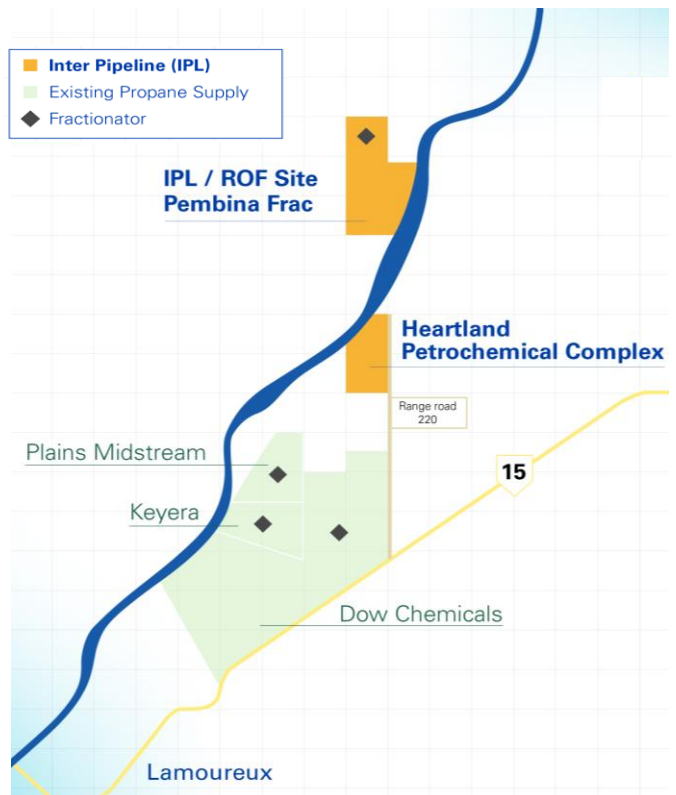

STRATEGIC RATIONALE

- ✓ Low utility costs and an oversupplied propane market in Western Canada drives a long-term, low-cost feedstock advantage
- ✓ Well-defined project that will utilize globally proven technologies and experienced engineering, procurement, and construction firms
- ✓ Integration with existing offgas business creates a competitive advantage; PDH can consume up to 12,000 b/d of high-purity propane produced at ROF
- ✓ Strong support from both the federal and provincial governments, who have awarded ~\$250 million in financial incentives for the project
- ✓ Over 13,000 direct and indirect jobs are expected to be created for Canadians over the construction period

FACILITIES

AREA OF OPERATIONS

CONTRACTUAL FRAMEWORK AND EBITDA GENERATION

Inter Pipeline is conducting a two phase contracting process to anchor the investment:

- Phase 1, which has been completed, resulted in Inter Pipeline securing certain cost-of-service contracts that have an average term of 9 years.
- Phase 2 contracting is ongoing, with the objective of securing between 70 and 85 percent of total petrochemical processing capacity under cost-of-service contracts over the construction period.
- Generally, contracts are structured to provide a fixed return-on-capital payment, plus a recovery of operating and transportation costs, eliminating Inter Pipeline's exposure to propane or polypropylene commodity price fluctuations. Inter Pipeline intends to utilize the remaining uncontracted plant processing capacity for its own commercial purposes.

Target EBITDA

- Cost-of-Service:** No volume or commodity price exposure
- Fee-Based:** Volume exposure but no commodity price risk
- Commodity-Based:** Volume and commodity price exposure
- Product Margin:** Midstream marketing activities

Contract Summary

Long-Term Average EBITDA	Approximately \$450 to \$500 million per year
Duration (Phase 1 and 2)	Targeting up to 10 years

HPC SITE – Q2 2020

CAPITAL PROFILE

\$ Million

Total project cost of ~\$4.0 billion
